DETAILED ACTION

This Office Action is in response to the amendment filed 12 May 2005.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,2,13,14 and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Kang et al. (U.S. Patent 6,372,598).

Kang discloses a capacitor (Figs. 4f and 6c) that contains a lower electrode on an integrated circuit substrate, where the lower electrode comprises a metal layer (406/408(606/608)) and hemispherical grain lumps both formed of one of platinum or ruthenium that protrude from the metal layer opposite the substrate, a Ta₂O₅ dielectric layer (414) on the hemispherical grain lumps, an upper electrode (416) on the dielectric layer, where the metal layer comprises a first and second portion where the second portion is on the first portion, where the first portion (608) is formed of Pt (platinum) and the second portion (606) is formed of Ru (ruthenium) (Fig. 6). (Column 5, lines 1-6)

Response to Arguments

Applicant's arguments filed 12 May 2005 have been fully considered but they are not persuasive. Applicant argues that the Kang reference does not disclose the metal layer having a first portion and second portion where the first portion is formed of Pt and the second portion is formed of Ru, Rh, Os or Pd, whereas the Kang reference discloses these limitations as stated in the previous office action. The Kang reference discloses that the metal layer (606/608) has a first portion 608 comprised of Pt and a second portion 606 comprised of Ru, Rh, Os or Pd where the first portion is formed on the second portion as shown in column 5, lines 1-10 and column 12, lines 46-51. Therefore the Kang reference discloses the claimed invention and therefore the rejection stands.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
